

THE SNAKE BEHIND THE THRONE

NO CROWN. NO MASTER. JUST HISS.

THE LEGEND

- Every kingdom has a king.
- Every king has a crown.

And somewhere behind the throne is someone who understands what is really happening.

Cunning. Patient. Opportunistic. Always watching. Always one move ahead.

\$HISS takes inspiration from the legends, characters and folklore surrounding Robin Hood and Sherwood Forest and transforms that world into a community driven meme culture for Robinhood Chain.

We are not here to build another anonymous token with a logo, a chart and a Telegram group.

We are building a character.

A story.

A community.

A movement.

Meet Sir Hiss.

The Outlaws are gathering.

WHAT IS \$HISS?

\$HISS is a community driven meme token built for the Robinhood Chain ecosystem.

*At its centre is Sir Hiss, **The Snake Behind the Throne.***

\$HISS combines meme culture, storytelling, community participation, social content and the emerging Robinhood Chain ecosystem into one recognizable brand.

- *There are no promises of guaranteed returns.*
- *There is no fictional utility created simply to justify a token.*

The proposition is much simpler:

- ✓ *Build a memorable character.*
- ✓ *Build an engaged community.*
- ✓ *Build culture around the token.*

And let the community determine how far the legend travels.

WHY ROBINHOOD CHAIN?

\$HISS is being built around the emergence of *Robinhood Chain*.

\$Robinhood describes Robinhood Chain as a permissionless, Ethereum compatible Layer 2 network built using Arbitrum technology. The network is EVM compatible, uses ETH for gas and has Chain ID **4663**.

This creates an opportunity for an entirely new native culture to emerge alongside the financial infrastructure.

Every blockchain eventually develops more than infrastructure.

It develops communities.

Characters.

Memes.

Stories.

And legends.

\$HISS intends to be part of that cultural layer.

✓ *Robinhood has the Chain.* ✓ *Sherwood has the Outlaws.*

✓ *And somewhere behind the throne...*

✓ *there is always a snake.*

THE \$HISS PHILOSOPHY

\$HISS is built around five simple principles.

✓ COMMUNITY FIRST

A meme exists because people carry it forward.

The strength of \$HISS should therefore come from its community rather than promises made by a central authority.

✓ CULTURE OVER COMPLEXITY

\$HISS does not need complicated financial engineering to explain why it exists.

The character, narrative and community are the product.

✓ LONG TERM BRAND BUILDING

Launching the token is the beginning of the story rather than the end.

✓ TRANSPARENCY

Token information, launch mechanics and relevant blockchain activity should be independently verifiable onchain.

✓ PARTICIPATION

\$HISS is designed to encourage participation through content, memes, community campaigns, competitions and social activity.

THE OUTLAWS

The \$HISS community is known as:

THE OUTLAWS

The Outlaws are not spectators.

They are the people who spread the story.

Create memes.

Make videos.

Join campaigns.

Welcome newcomers.

Build tools.

Create content.

Grow local communities.

And carry \$HISS beyond Sherwood.

There is no king of The Outlaws.

There is no crown to inherit.

There is simply a community building around a shared character and culture.

Different people.

Same HISS.

THE \$HISS TOKEN

Token Name	Sir Hiss
Ticker	\$HISS
Network	Robinhood Chain
Network Type	Ethereum compatible Layer 2
Gas Token	ETH
Chain ID	4663
Launch Mechanism	PONS bonding curve
Total Supply	1,000,000,000 \$HISS
Contract Address	Published at TGE

Always verify the official contract address through the official \$HISS website and official community channels before interacting with the token.

Names and ticker symbols can be copied. PONS itself specifically warns users to verify token addresses rather than relying on a name or symbol alone.

FAIR LAUNCH

\$HISS is designed around a public PONS launch rather than a conventional private token sale.

Under the documented PONS launch model, tokens begin trading through a bonding curve. The fixed supply is placed into that mechanism rather than allocating a conventional percentage of supply to team, private sale and public sale buckets.

That distinction is important.

There is no traditional:

Team allocation

VC allocation

Private presale allocation

Influencer allocation

Marketing allocation carved out of supply

The market begins through the launch mechanism.

Participation happens onchain.

TOKEN DISTRIBUTION

1,000,000,000 \$HISS

100% LAUNCH SUPPLY

Rather than publishing an artificial pie chart filled with internal allocations, the PONS model uses a fixed supply launched into its bonding curve.

The PONS documentation describes its standard launch structure as a fixed 1 billion token supply, with no team allocation or vesting reserved by the launch mechanism.

Therefore \$HISS does not require complicated tokenomics.

Its philosophy is:

- ✓ NO PRIVATE ROUND.
- ✓ NO VC ROUND.
- ✓ NO HIDDEN TEAM ALLOCATION.
- ✓ NO CROWN.

THE BONDING CURVE

\$HISS initially trades through the PONS bonding curve.

Instead of beginning with a conventional decentralized exchange liquidity pool, participants buy and sell against the curve.

As demand changes, the bonding curve determines the token price according to its programmed mechanics.

The process is public and executed onchain.

PONS describes itself as non custodial: transactions are submitted and signed from participants' own wallets rather than PONS taking custody of user funds.

GRADUATION

The first major milestone in the \$HISS story is:

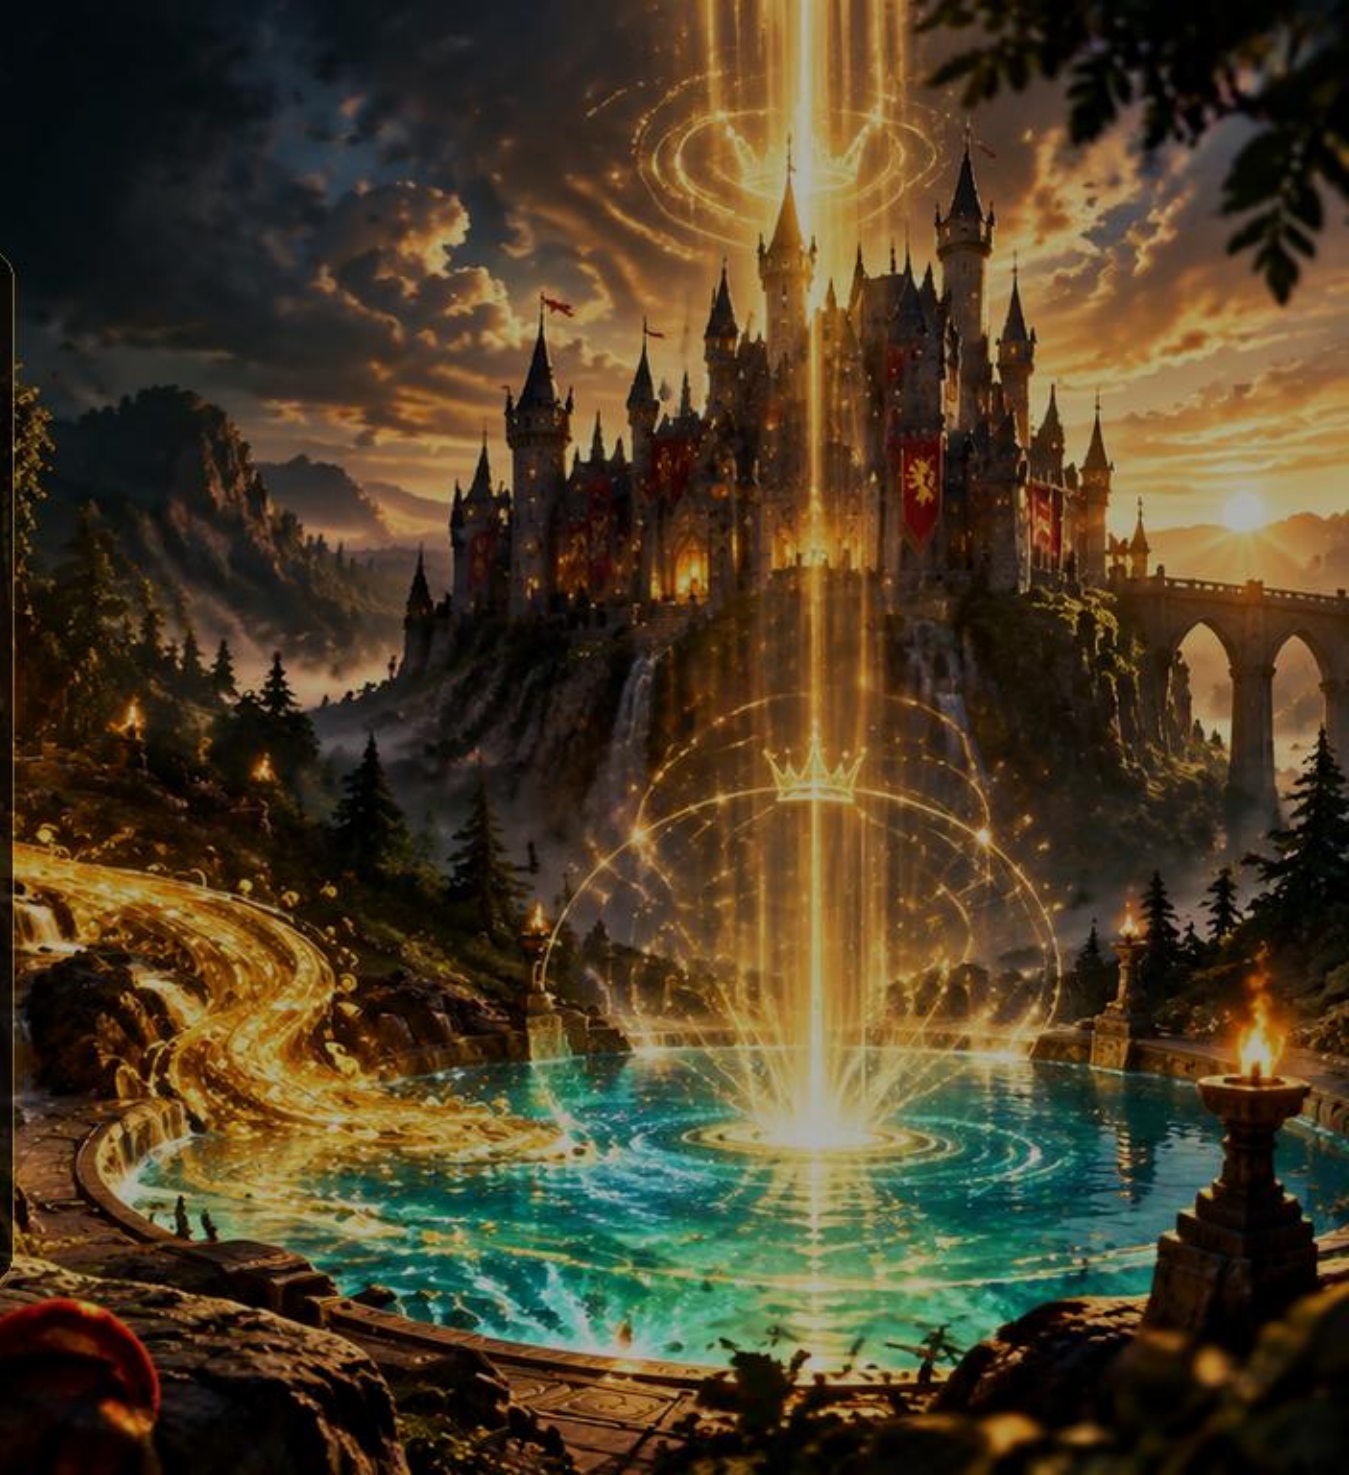

GRADUATION

Under the documented PONS launch model, once the bonding curve reaches its graduation threshold, accumulated liquidity migrates into a Uniswap V4 pool.

The resulting liquidity is designed to be permanently locked.

This transition takes \$HISS from its initial bonding curve phase into open decentralized exchange trading.

The exact mechanics applicable to \$HISS should always be verified against the live PONS contract and launch configuration at TGE.

THE \$HISS UNIVERSE

\$HISS is more than one snake.

The creative universe is based around Sherwood.

Sir Hiss sits at its centre, but the narrative can expand through characters, locations, events and community created stories.

- ✓ The Crown represents authority.
- ✓ Sherwood represents freedom.
- ✓ The Outlaws represent community.
- ✓ Sir Hiss represents intelligence, cunning and opportunity.

This gives \$HISS something most meme tokens never develop:

A world.

The world can continue evolving long after launch.

CONTENT IS THE ENGINE

The \$HISS growth model is built heavily around content.

That includes:

- Sir Hiss cinematic stories
- Sherwood narrative campaigns
- Memes
- Community generated content
- Short form videos
- X campaigns
- Telegram campaigns
- Community competitions
- KOL and creator collaborations
- The Outlaws campaigns
- Character introductions
- Robinhood Chain ecosystem content

The objective is not simply to repeatedly tell people to buy a token.

The objective is to create a world people want to follow.

THE CHARACTERS OF SHERWOOD

The \$HISS universe can introduce familiar archetypes and folklore inspired characters from the world surrounding Sherwood.

Robin Hood.

Little John.

Maid Marian.

Friar Tuck.

The Sheriff.

The King.

The Outlaws.

And, of course:

SIR HISS

Each character creates another opportunity for stories, memes, community interaction and campaigns.

Sir Hiss remains the central character tying the universe together.

COMMUNITY REWARDS

Community growth may be supported through campaigns and promotional rewards funded separately from the fixed token launch mechanics where appropriate.

Potential activities include:

- Content competitions
- Meme competitions
- Creative campaigns
- Community quests
- Social campaigns
- Ambassador programs
- Micro KOL campaigns
- Bounty programs
- Community recognition
- Partner campaigns

Any campaign involving rewards should publish its individual rules, eligibility requirements and reward structure separately.

Participation in the community does not guarantee financial reward.

ROADMAP

CHAPTER I

THE WHISPER

- Brand creation
- Sir Hiss introduced
- Website launch
- X community established
- Telegram community established
- The Outlaws begin gathering
- Sherwood narrative begins
- Pre TGE content campaign

CHAPTER II

THE SNAKE ARRIVES

- \$HISS TGE
- PONS bonding curve launch
- Contract verification
- Community launch campaign
- Creator and KOL activation
- Task and bounty campaigns
- First major community expansion

CHAPTER III

THE FOREST AWAKENS

- Target PONS graduation
- Uniswap V4 liquidity
- Expanded community campaigns
- More Sherwood characters
- Community generated content
- Strategic ecosystem collaborations
- Robinhood Chain community integration

CHAPTER IV

THE OUTLAWS RISE

- Expanded \$HISS universe
- International communities
- Community ambassadors
- Creator partnerships
- Merchandise exploration
- Community events
- New digital experiences
- Expanded Sherwood storytelling

CHAPTER V

THE LEGEND

This part cannot be written in advance.

It belongs to The Outlaws.

The direction of \$HISS after launch will depend on the community, ecosystem, market and opportunities that develop around Robinhood Chain.

Every movement starts with a few.

Then the forest hears it.

WHAT \$HISS IS NOT

- ✗ \$HISS is not equity.
- ✗ \$HISS does not represent ownership in Robinhood, Robinhood Chain, PONS or any other company.
- ✗ \$HISS does not provide ownership rights over the \$HISS team or project.
- ✗ \$HISS is not a stablecoin.

- ✗ \$HISS does not guarantee yield.
- ✗ \$HISS does not guarantee appreciation.
- ✗ \$HISS does not guarantee liquidity.
- ✗ \$HISS does not promise that any roadmap item will be completed.

\$HISS is an experimental community driven crypto asset and meme project.

RISK

Crypto assets are highly speculative.

\$HISS may experience extreme volatility.

Participants could lose some or all of the value used to acquire \$HISS.

Smart contracts, wallets, bridges, launchpads and decentralized exchanges can contain technical vulnerabilities or experience failures.

Liquidity can change rapidly.

Blockchain networks can experience interruptions.

Regulations can change.

Third party services can disappear.

Scammers can create fake websites, social accounts or tokens using the \$HISS name.

Users should independently verify information and never participate with funds they cannot afford to lose.

INDEPENDENCE

\$HISS is an independent community project. It is not issued, operated, sponsored or endorsed by Robinhood Markets, Inc. or its affiliates, unless an official relationship is explicitly announced by the relevant parties.

References to Robinhood Chain describe the blockchain network on which \$HISS operates. Likewise, references to folklore, historical characters and Sherwood themes are part of the creative identity of the project and should not be interpreted as affiliation with unrelated intellectual property owners.

THE MISSION

The mission is simple.

Build one of the most recognizable communities and meme cultures emerging from Robinhood Chain.

Not through promises.

Not through complicated tokenomics.

Not through manufactured utility.

Through:

CHARACTER.

CULTURE.

COMMUNITY.

STORY.

THE OUTLAWS.

And one extremely cunning snake.

THE FINAL WORD

Kings make rules.

Outlaws make legends.

Crowns come and go.

HISS remains.

The throne was never the destination.

The opportunity was.

Welcome to Sherwood.

Welcome to The Outlaws.

\$HISS

THE SNAKE BEHIND THE THRONE

NO CROWN.

NO MASTER.

JUST HISS.
